ChromoArt Colorants

ChromoArt colorants are universal colorants for tinting at retail points. Our colorants are designed for volumetric dosing (computerized tinting) and can be used for tinting decorative paints and decorative coatings, both water-based and organic solvent-based.

They can be applied to tint silicate and silicone coating materials. This series of colorants is suitable for tinting paints for both exterior and interior use.

Where you can use it

We offer universal VOC-free colorants specifically crafted for coloring water-based and solvent-based coatings, including paints, facade coatings, varnishes.

Our colorants are suitable for use with the following products:

- Water-based architectural paints: acrylic and vinylic latexes and alkyds hydro.
- Solvent-based architectural paints: alkyds and acrylic copolymers in solution.
- Water-based plasters for facades.
- Water-based decorative paints and coatings.
- Varnishes.

Detailed Specifications

«The 'ChromoArt Tint' color matching system comprises base paint, colorants, tinting machine, color-matching software (including color management and selection) and mixer.»

Our technology allow you to tint the paint in more than 25 thousand shades using only 2 base paints and 16 pigment dyes.

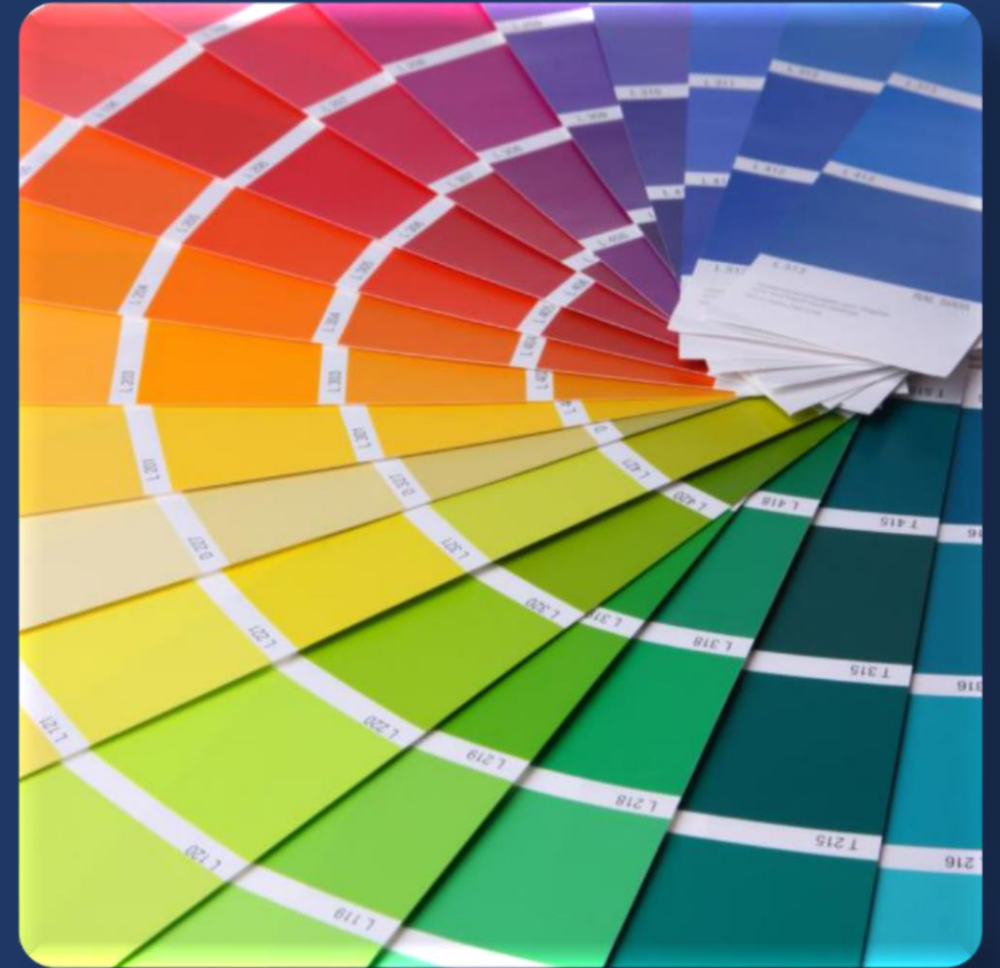

Printed colors serve as a guideline only. Actual product color will depend on application and concentration.

Advantages of ChromoArt colorants

- Our colorants are suitable for widely used recognized color palettes such as Monicolor Nova, RAL Effect, RAL Classic, British Standard, NCS, and SSG.
- We offer a broad spectrum of color shades, and their variety continues to expand.
- Direct replacement of your existing colorants.
- No waste, no cleaning, preservation of existing database.
- VOC free universal patented polymeric colorants.
- Keeps the paint properties.
- Colorants of the same colors and concentrations that can be added on top of existing colorants.

ChromoArt colorants for paint and coatings industry

We develop colorants designed for optimal performance, supplying both organic and inorganic options for coloring coatings. Our colorants not only add color but also deliver enhanced features such as corrosion protection and high heat resistance.

Whether you seek highly opaque colorants for efficient coating or vibrant hues for painted walls, our range ensures reliable performance.

Service

We offer not only color tinting equipment and colorants but also provide service for both the equipment and software used in color matching.

Our specialists can assist you in developing and adapting our colorants to your base paints. If you don't have base paints, we can help you develop them.

Our experts are always ready to assist you online or come to your location.

Laboratory

Our company has its own research center. We constantly invest in improving the quality characteristics of our products, incorporating the latest developments in production.

We use innovative technologies in dye manufacturing, creating the science of color through professionalism and global trends.

ChromoArt - represent the latest generation of colorants!

About company

We are the manufacturing company specializing in the development and production of colorants for the paints and coatings industry, as well as decorative finishes. Renowned chemists and technologists from Hungary and Italy have crafted the formulations for our products. Our production exclusively utilizes high-quality raw materials sourced from reputable global suppliers.

Our factories are located in the Central Asian region and equipped with the most modern equipment. We are committed to producing high-quality products and fostering long-term partnerships with our collaborators.
